

# Wakim Solutions Group

## Helpdesk Ticketing & IT Support Operations Lab

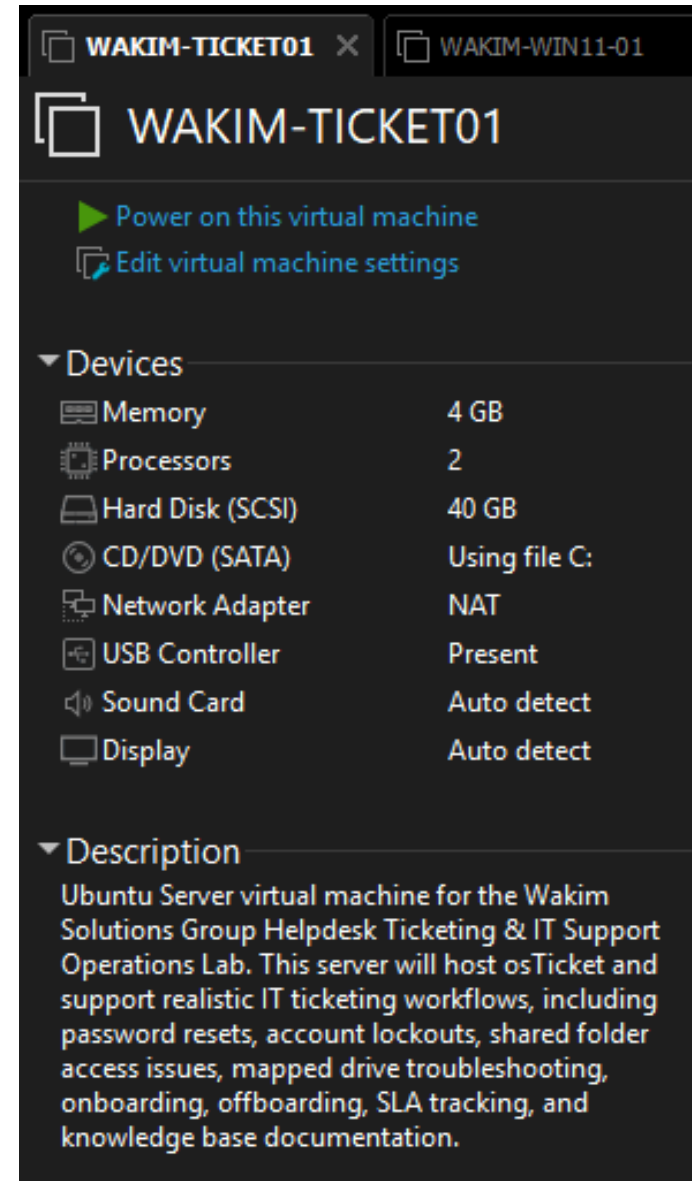

osTicket-based helpdesk lab connected to an Active Directory environment to simulate real IT support workflows, ticket documentation, SLA tracking, escalation, and knowledge base creation.

**Created by: Roy Wakim**

**Tools: VMware Workstation Pro • Ubuntu Server • Apache • MariaDB • PHP • osTicket • Active Directory • Windows 11**

Created a dedicated Ubuntu Server VM named WAKIM-TICKET01 to host osTicket separately from the domain controller, simulating a more realistic IT environment with separated infrastructure services.

Confirmed that WAKIM-TICKET01 received network connectivity through the VMware NAT network before installing the helpdesk server.

#### Network configuration

[\[ Help \]](#)

Configure at least one interface this server can use to talk to other machines, and which preferably provides sufficient access for updates.

| NAME                                                                                                 | TYPE              | NOTES |
|------------------------------------------------------------------------------------------------------|-------------------|-------|
| [ ens33                                                                                              | eth               | - ▶ ] |
| DHCPv4                                                                                               | 192.168.88.130/24 |       |

[ Create bond ▶ ]

---

Configured the Ubuntu Server hostname as wakim-ticket01 to identify it as the dedicated helpdesk ticketing server in the lab environment.

Profile configuration [ Help ]

Enter the username and password you will use to log in to the system. You can configure SSH access on a later screen, but a password is still needed for sudo.

Your name:

Roy Wakim

Your servers name:

wakim-ticket01

The name it uses when it talks to other computers.

Pick a username:

roy

Choose a password:

\*\*\*\*\*

Confirm your password:

\*\*\*\*\*\_

---

Enabled OpenSSH Server to allow remote administration of WAKIM-TICKET01 from the domain-joined Windows workstation.

#### SSH configuration

You can choose to install the OpenSSH server package to enable secure remote access to your server.

[X] Install OpenSSH server

[X] Allow password authentication over SSH

[ Import SSH key ► ]

#### AUTHORIZED KEYS

No authorized key

# Updated Ubuntu Server packages to prepare WAKIM-TICKET01 for secure osTicket installation and web server configuration.

## Secured the MariaDB installation by removing anonymous users, disabling remote root login, removing the test database, and reloading privilege tables.

```
roy@wakim-ticket01:~$ sudo mysql_secure_installation
```

```
NOTE: RUNNING ALL PARTS OF THIS SCRIPT IS RECOMMENDED FOR ALL MariaDB
SERVERS IN PRODUCTION USE! PLEASE READ EACH STEP CAREFULLY!
```

```
In order to log into MariaDB to secure it, we'll need the current
password for the root user. If you've just installed MariaDB, and
haven't set the root password yet, you should just press enter here.
```

```
Enter current password for root (enter for none):
OK, successfully used password, moving on...
```

```
Setting the root password or using the unix_socket ensures that nobody
can log into the MariaDB root user without the proper authorisation.
```

```
You already have your root account protected, so you can safely answer 'n'.
```

```
Switch to unix_socket authentication [Y/n] Y
Enabled successfully!
Reloading privilege tables..
... Success!
```

```
You already have your root account protected, so you can safely answer 'n'.
```

```
Change the root password? [Y/n] N
... skipping.
```

```
By default, a MariaDB installation has an anonymous user, allowing anyone
to log into MariaDB without having to have a user account created for
them. This is intended only for testing, and to make the installation
go a bit smoother. You should remove them before moving into a
production environment.
```

```
Remove anonymous users? [Y/n] Y
... Success!
```

```
Normally, root should only be allowed to connect
ensures that someone cannot guess at the root pa
```

```
Disallow root login remotely? [Y/n] Y
... Success!
```

```
By default, MariaDB comes with a database named
access. This is also intended only for testing,
before moving into a production environment.
```

```
Remove test database and access to it? [Y/n] Y
- Dropping test database...
... Success!
- Removing privileges on test database...
... Success!
```

```
Reloading the privilege tables will ensure that all changes made so far
will take effect immediately.
```

```
Reload privilege tables now? [Y/n] Y
... Success!
```

```
Cleaning up...
```

```
All done! If you've completed all of the above steps, your MariaDB
installation should now be secure.
```

```
Thanks for using MariaDB!
roy@wakim-ticket01:~$

    DocumentRoot /var/www/html/osticket
    ServerName wakim-ticket01.wakimsolutions.local

    <Directory /var/www/html/osticket>
        Options FollowSymLinks
        AllowOverride All
        Require all granted
    </Directory>

    ErrorLog ${APACHE_LOG_DIR}/osticket_error.log
    CustomLog ${APACHE_LOG_DIR}/osticket_access.log combined
</VirtualHost>
```

---

Enabled the osTicket Apache site configuration and verified the web server syntax before restarting Apache.

```
roy@wakim-ticket01:/var/www/html/osticket/include$ sudo a2ensite osticket.conf
Enabling site osticket.
To activate the new configuration, you need to run:
    systemctl reload apache2
roy@wakim-ticket01:/var/www/html/osticket/include$ sudo a2ensite 000-default.conf
Site 000-default already enabled
roy@wakim-ticket01:/var/www/html/osticket/include$ sudo systemctl reload apache2
```

```
roy@wakim-ticket01:/var/www/html/osticket/include$ sudo apache2ctl configtest
Syntax OK
roy@wakim-ticket01:/var/www/html/osticket/include$ sudo systemctl restart apache2
roy@wakim-ticket01:/var/www/html/osticket/include$ _
```

Accessed the osTicket web installer from the Windows 11 domain workstation, confirming that the helpdesk server is reachable over the lab network.

The screenshot shows a Windows 11 environment. At the top, a Command Prompt window displays the command `hostname` and the output `WAKIM-WIN11-01`. Below it, a web browser window is open to the URL `192.168.88.20/osticket/setup/install.php`. The browser tab is titled "osTicket Installer". The page content includes the osTicket logo, the title "Installing osTicket v1.18.3", and links for "Installation Guide", "Get Professional Help", and "Contact Us". The main heading is "osTicket Basic Installation" with a note: "Please fill out the information below to continue your osTicket installation. All fields are required." The form is divided into two sections: "System Settings" and "Admin User".

Completed the osTicket web installer using the dedicated MariaDB database and administrator account for the Wakim Solutions Group Helpdesk.

The screenshot shows a web browser window with the URL `192.168.88.20/osticket/setup/install.php`. The page is titled "Installing osTicket v1.18.3" and features the osTicket logo. The main content area displays a "Congratulations!" message and provides instructions for setting file permissions. A sidebar on the right offers "What's Next?" guidance, including links to the Admin Panel, osTicket wiki, and Commercial Support. The footer contains copyright information for 2025.

**Command Prompt**

```
C:\Users\emily.tremblay>hostname  
WAKIM-WIN11-01
```

**osTicket Installer**

**OSTicket Installer**  
Support Ticket System

**Congratulations!**  
Your osTicket installation has been completed successfully. Your next step is to fully configure your new support ticket system for use, but before you get to it please take a minute to cleanup.

**Config file permission:**  
Change permission of ost-config.php to remove write access as shown below.

- **CLI:**  
`chmod 0644 include/ost-config.php`
- **Windows PowerShell:**  
`icacls include\ost-config.php /reset`
- **FTP:**  
Using WS\_FTP this would be right hand clicking on the file, selecting chmod, and then remove write access
- **Cpanel:**  
Click on the file, select change permission, and then remove write access.

Below, you'll find some useful links regarding your installation.

Documented the account lockout resolution in osTicket by adding an internal troubleshooting note and replying to the user with follow-up instructions.

The screenshot displays a vertical list of two items in a ticketing system interface. Each item has a grey circular profile icon on the left. The first item is a yellow note with the text 'David Reed posted 5/13/26 7:33 AM' and 'AD Account Lockout Resolved'. The second item is an orange reply with the text 'David Reed posted 5/13/26 7:34 AM'. Both items have a dropdown arrow icon on the right side of their header bars.

**David Reed** posted 5/13/26 7:33 AM AD Account Lockout Resolved

Confirmed account lockout in Active Directory. Unlocked the account, reset temporary password, required password change at next logon, and verified successful login from the Windows 11 workstation.

**David Reed** posted 5/13/26 7:34 AM

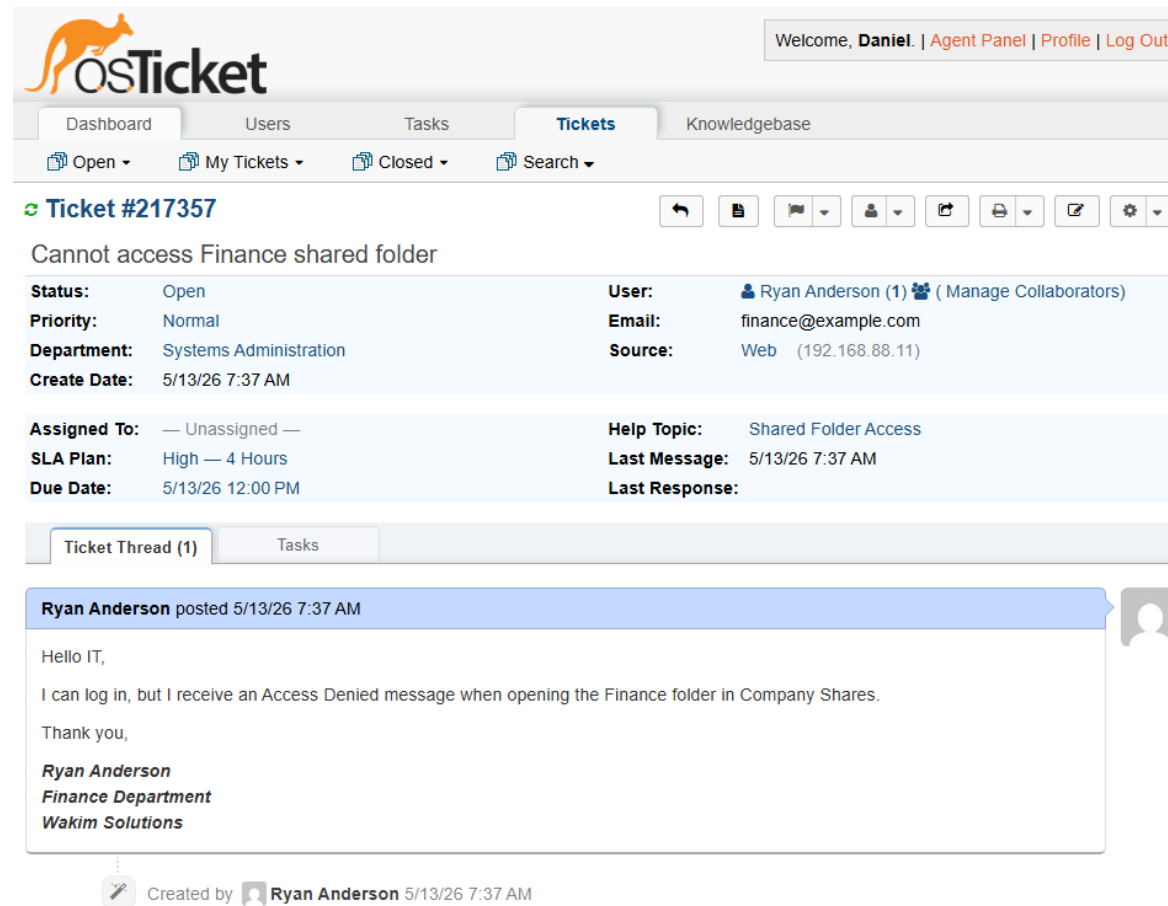

Hello,

Your account has been unlocked and your password has been reset. Please sign in using the temporary password provided and create a new password when prompted.

Thank you,

Wakim Solutions Group Helpdesk

Created a shared folder access ticket and routed it to Systems Administration for permissions troubleshooting.

The screenshot displays the OSTicket web application interface. At the top, the OSTicket logo is on the left, and a user welcome message 'Welcome, Daniel.' with links for 'Agent Panel', 'Profile', and 'Log Out' is on the right. Below the header is a navigation bar with tabs for 'Dashboard', 'Users', 'Tasks', 'Tickets' (which is active), and 'Knowledgebase'. Under the 'Tickets' tab, there are filters for 'Open', 'My Tickets', 'Closed', and a 'Search' button. The main content area shows 'Ticket #217357' with the title 'Cannot access Finance shared folder'. To the right of the title are several action icons. Below the title, ticket details are organized into two columns. The first column includes 'Status: Open', 'Priority: Normal', 'Department: Systems Administration', and 'Create Date: 5/13/26 7:37 AM'. The second column includes 'User: Ryan Anderson (1) (Manage Collaborators)', 'Email: finance@example.com', 'Source: Web (192.168.88.11)', 'Assigned To: — Unassigned —', 'SLA Plan: High — 4 Hours', 'Due Date: 5/13/26 12:00 PM', 'Help Topic: Shared Folder Access', 'Last Message: 5/13/26 7:37 AM', and 'Last Response:'. Below the details is a 'Ticket Thread (1)' tab. The thread shows a post by 'Ryan Anderson' from '5/13/26 7:37 AM'. The message content is: 'Hello IT, I can log in, but I receive an Access Denied message when opening the Finance folder in Company Shares. Thank you, Ryan Anderson Finance Department Wakim Solutions'. At the bottom, a footer indicates the ticket was 'Created by Ryan Anderson 5/13/26 7:37 AM'.

Ticket Thread (1)Tasks

**Grace Morrison** posted 5/13/26 8:06 AM

Hello IT,

The Company Shares drive is not appearing after I log in to the workstation.

Thank you,

*Grace Morrison*  
*Sales Department*  
*Wakim Solutions*

 Created by  **Grace Morrison** 5/13/26 8:06 AM

Used gpresult and gpupdate to verify Group Policy application and troubleshoot the missing mapped drive.

```
Command Prompt

C:\Users\grace.morrison>gpupdate /force
Updating policy...

Computer Policy update has completed successfully.
User Policy update has completed successfully.
```

```
Command Prompt

C:\Users\grace.morrison>gpresult /r

Microsoft (R) Windows (R) Operating System Group Policy Result tool v2.0

Confirmed the Company Shares mapped drive appeared after refreshing Group Policy and validating policy application.

Documented the mapped drive resolution in osTicket by adding an internal troubleshooting note, confirming Group Policy refresh with gpupdate /force, validating the Company Shares drive, and replying to the user with follow-up instructions.

**Emily Tremblay** posted 5/13/26 8:30 AM

Hello IT,

Please disable access for former employee Jason Miller effective immediately.

Employee Name: Jason Miller

Department: Sales

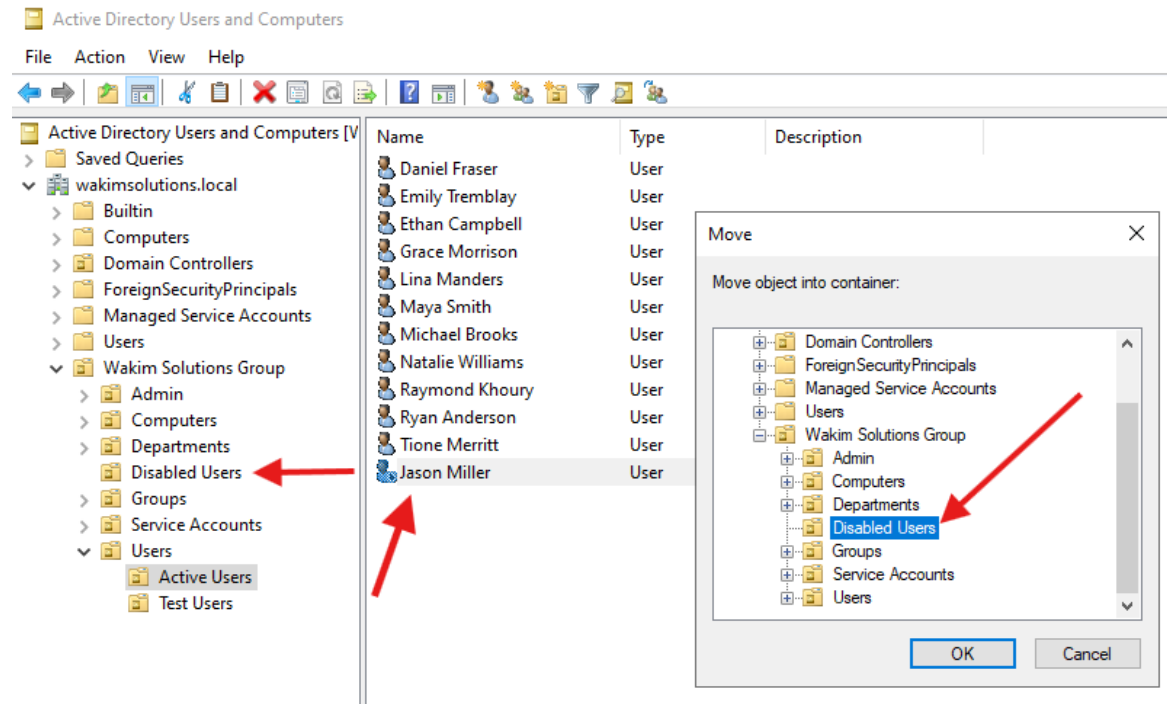

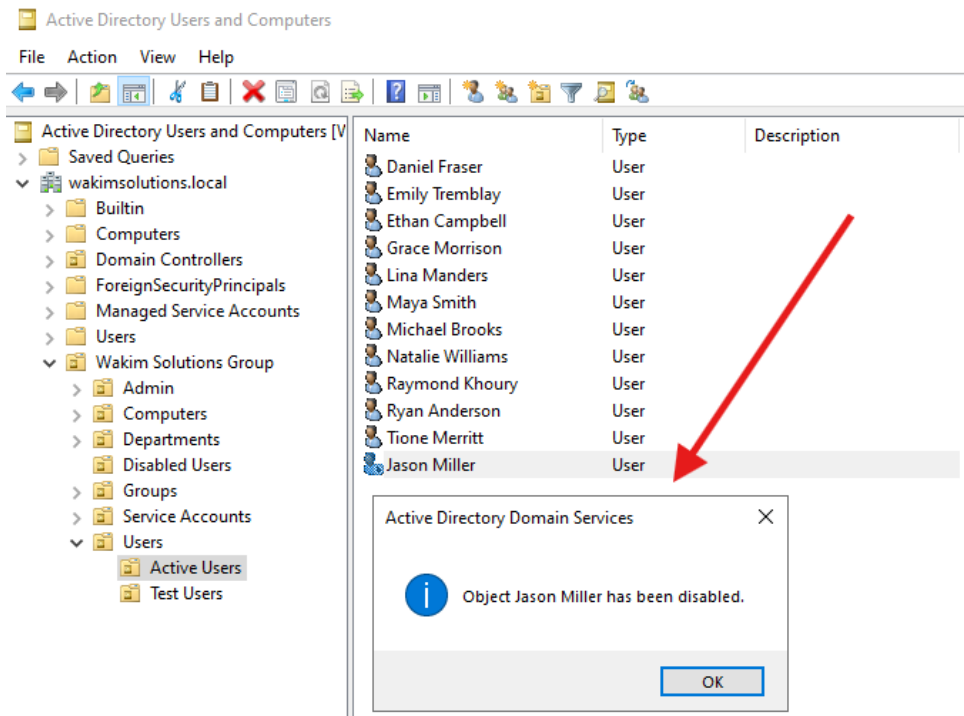

Action Required: Disable account and prevent domain login.

Thank you,

**Emily Tremblay**  
**HR Department**  
**Wakim Solutions**

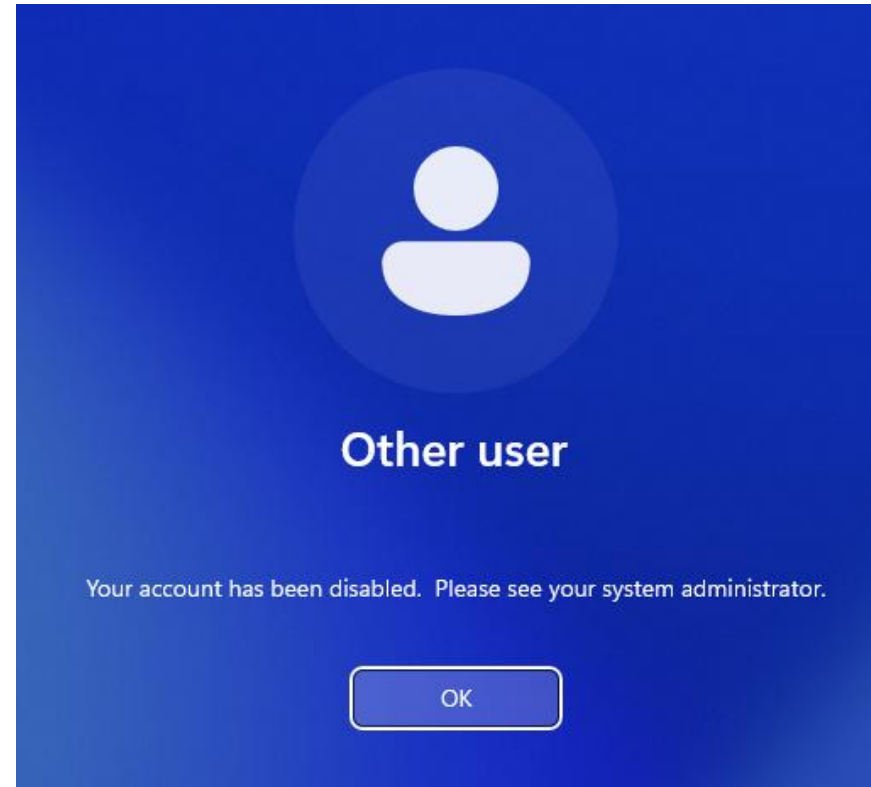

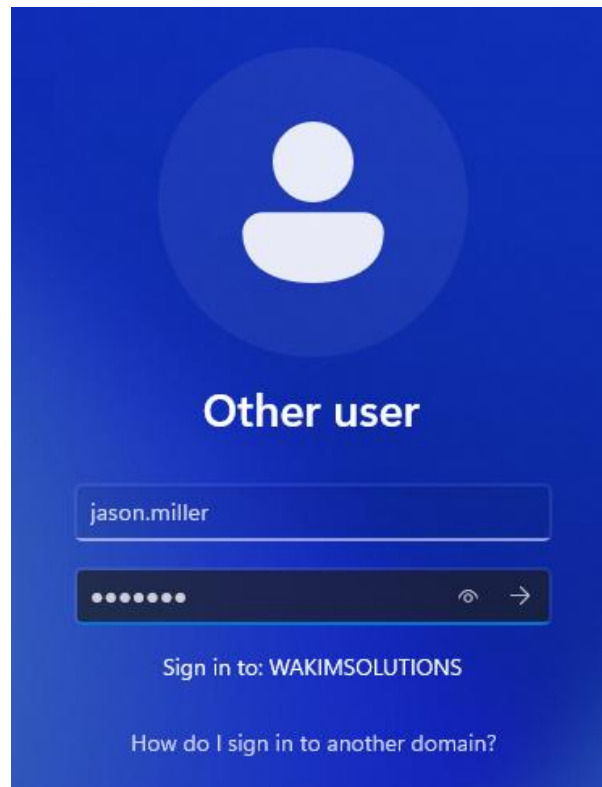

Created by **Emily Tremblay** 5/13/26 8:30 AM

# Disabled the former employee account and moved it to the Disabled Users OU as part of the offboarding process.

---

Verified that the disabled user account could no longer authenticate to the domain workstation.

---

Documented the employee offboarding in osTicket by adding an internal note and updating the HR Coordinator upon completion.

David Reed posted 5/13/26 8:48 AM Employee Offboarding Completed - Jason Miller

Disabled Jason Miller's Active Directory account, moved the account to the Disabled Users OU, and verified that domain login was blocked from the Windows 11 workstation.

Enabled the osTicket Knowledge Base to create reusable internal support documentation for common helpdesk scenarios.

The screenshot shows the osTicket web interface. At the top left is the osTicket logo, featuring an orange kangaroo. To the right of the logo is a user greeting: "Welcome, Roy. | [Agent Panel](#) | [Profile](#) | [Log Out](#)". Below the logo is a navigation bar with tabs: "Dashboard", "Settings" (which is active), "Manage", "Emails", and "Agents". Under the "Settings" tab, there is a sub-navigation bar with icons and labels: "Company", "System", "Tickets", "Tasks", "Agents", "Users", and "Knowledgebase". The main content area is titled "Knowledge Base Settings and Options". It contains a warning message: "Disabling knowledge base disables clients' interface." Below this, there are two sections. The first is "Knowledge Base Status:" with two options: "Enable Knowledge Base" (checked with a blue checkbox) and "Require Client Login" (unchecked with a white checkbox). The second section is "Canned Responses:" with one option: "Enable Canned Responses" (checked with a blue checkbox). At the bottom of the settings area are two buttons: "Save Changes" (orange) and "Reset Changes" (grey). The footer of the page contains the copyright notice: "Copyright © 2006-2026 Wakim Solutions Group Helpdesk All Rights Reserved."

#### Question \*

How to Reset a User Password in Active Directory

#### Answer \*

<>   A Aa B I U       

##### Purpose:

This article documents the standard helpdesk procedure for resetting a domain user password in Active Directory.

##### Steps:

1. Confirm the user's identity and ticket details.
2. Open Active Directory Users and Computers through RSAT or the domain controller.
3. Locate the user account.
4. Right-click the account and select Reset Password.
5. Enter a temporary password.
6. Select "User must change password at next logon."
7. Save the change.
8. Update the osTicket internal note with the action completed.
9. Reply to the user using the password reset response template.
10. Close the ticket after confirmation or successful resolution.

##### Validation:

The user should be able to sign in with the temporary password and create a new password when prompted.

##### Skills/Tools:

Active Directory, RSAT, password reset workflow, osTicket documentation.

### Question \*

How to Troubleshoot an Account Lockout

### Answer \*

<>   Aa  B  /  U  S      

#### Purpose:

This article documents the process for resolving a domain account lockout.

#### Steps:

1. Review the osTicket request and confirm the affected username.
2. Open Active Directory Users and Computers.
3. Locate the affected user account.
4. Open the Account tab and confirm whether the account is locked.
5. Select "Unlock account" if the account is locked.
6. Reset the password if required.
7. Require password change at next logon.
8. Ask the user to sign in again.
9. Document the resolution in the ticket.

#### Validation:

The user should be able to authenticate successfully after the account is unlocked and the password is reset.

#### Common Causes:

Incorrect password attempts, saved old credentials, mapped drive authentication, or repeated login attempts from another device.]

#### Skills/Tools:

Active Directory, account lockout policy, password reset, osTicket documentation.

Created a knowledge base article for troubleshooting shared folder access using AD group membership and whoami /groups.

#### Knowledgebase Article Content

Here you can manage the question and answer for the article. Multiple languages are available if enabled in the admin panel.

##### Question \*

How to Troubleshoot Shared Folder Access Denied

##### Answer \*

<>   Aa B / U       

##### Purpose:

This article documents the process for resolving department shared folder access issues.

##### Steps:

1. Confirm the affected user, department, and folder path from the ticket.
2. Ask the user to provide the exact error message if needed.
3. Verify the required department security group in Active Directory.
4. On the client workstation, run: `whoami /groups`
5. Check whether the required group appears in the user's current security token.
6. If the user is missing the group, add the user to the correct AD security group.
7. Have the user sign out and sign back in.
8. Test access to the shared folder again.
9. Document the root cause and resolution in `osTicket`.

##### Validation:

The user should be able to access the authorized department folder while restricted folders remain blocked.

##### Skills/Tools:

Active Directory security groups, NTFS permissions, `whoami /groups`, `osTicket` documentation.

##### Question \*

How to Troubleshoot a Missing Mapped Drive

##### Answer \*

<> ¶ A Aa B / U ↵ ☰ 📷 🎥 ☰ 🔗 —

###### Purpose:

This article documents the process for troubleshooting missing mapped network drives applied through Group Policy.

###### Steps:

1. Confirm the user and workstation affected.
2. Verify the mapped drive should be applied through Group Policy.
3. On the workstation, run: `gpresult /r`
4. Confirm whether the drive mapping GPO appears under applied user policies.
5. Run: `gpupdate /force`
6. Sign out and sign back in if needed.
7. Open File Explorer and check whether the mapped drive appears.
8. If the GPO is missing, verify OU placement, security filtering, and GPO link status.
9. Document troubleshooting steps and resolution in `osTicket`.

###### Validation:

The mapped network drive should appear under This PC after policy refresh and user session validation.

###### Skills/Tools:

Group Policy, `gpresult /r`, `gpupdate /force`, mapped drives, `osTicket` documentation.]

Created a User Lifecycle category for onboarding and offboarding support documentation.

The screenshot shows the OSTicket Knowledgebase interface. At the top, there's a navigation bar with links for Dashboard, Users, Tasks, Tickets, and Knowledgebase. Below this is a sub-navigation bar with links for FAQs, Categories, and Canned Responses. The main heading is "Add New Category". The form includes a "Category Type" section with three radio buttons: "Featured (on front-page sidebar)", "Public (publish)", and "Private (internal)". Below this is a tabbed interface with "Category Information" and "Internal Notes" tabs. The "Category Information" tab contains a "Parent" dropdown menu set to "Top-Level Category", a "Category Name" field with the value "User Lifecycle", and a "Category Description" text area containing the text "Internal support documentation for onboarding, offboarding, and user account lifecycle management." At the bottom right of the form are three buttons: "Add", "Reset", and "Cancel". The footer of the page contains the copyright notice: "Copyright © 2006-2026 Wakim Solutions Group Helpdesk All Rights Reserved."

##### Question \*

How to Process Employee Offboarding in Active Directory

##### Answer \*

<>  **A** Aa B / U ~~S~~      

###### Purpose:

This article documents the standard offboarding workflow for disabling former employee access.

###### Steps:

1. Review the offboarding ticket and confirm the employee name and effective date.
2. Locate the user in Active Directory.
3. Disable the user account.
4. Move the account to the Disabled Users OU.
5. Remove group memberships if required by policy.
6. Test that the account can no longer authenticate.
7. Document the action in osTicket.
8. Reply to HR or the requester confirming completion.
9. Close the ticket.

###### Validation:

The disabled account should not be able to log in to a domain workstation.

###### Skills/Tools:

Active Directory, disabled accounts, OU management, account lifecycle management, osTicket documentation.
